Tiny Pantry Instructions

1 Lay out the back panel on a flat surface. Using a drill, screw the side panels in place. For a faster and easier process, pre-paint the panels and pre-drill all holes.

2 Attach the bottom of the pantry, the shelf support and the shelf.

3 Screw down the roof, making sure you have even overlap in the front and the back.

4 For the door, first drill all the holes for the plexiglass windowpane. Then, use a hand screwdriver and caulk to attach the plexiglass and prevent cracking.

5 Add the hinges to the inside of the door and then connect the hinges to the pantry frame.

6 Attach shingles to the roof using roofing nails. For the final layer, use caulk to attach.

7 Utilize a hook-and-eye to keep the door closed.

8 Drill the attachment panel onto the bottom of the pantry. Hammer a stake into the ground at your desired location and attach to the bottom panel.
