

# BIG BOX OF SUNSHINE

*We're turning The Home Depot's soccer-field-size store rooftops into solar farms to increase our use of alternative and renewable energy.*

**104,000 ft<sup>2</sup>** of space sits atop the average Home Depot store

**35%** of a store's demand for electrical grid power is reduced by rooftop solar

**47**  
stores  
have rooftop  
solar panels

**45** stores  
have rooftop solar projects in development

We're ahead of our pledge to leverage **135 megawatts** of alternative or renewable energy by the end of 2020. We've set a new goal of **335 megawatts** by 2025.
